## Languages

Arabic (Native)

English (IELTS Certified)

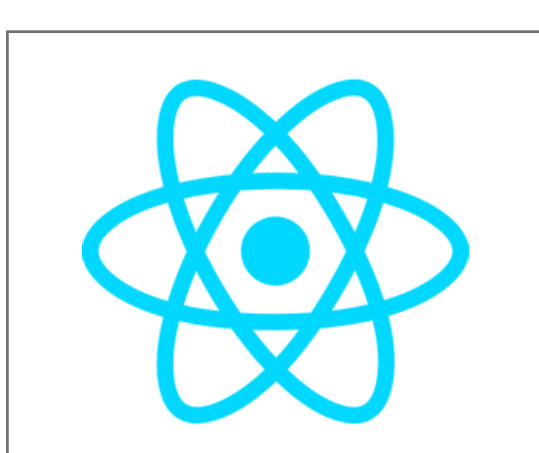

## Work

2020-now

**Freelance Full-stack Web Developer**

I worked on many freelancing platforms, like mostaql, khamsat and freelancer.com finished 30+ projects ranging from simple landing pages, and one-page sites introducing a certain company or a service to fully functioning eCommerce websites and social media apps, Clients were happy and satisfied.

## Skills

## Activities

June 2016

**Outstanding Students Camp**

By: General Union of Sudanese Students

August 2016

**International Meeting of Arab Youth**

Represented my country at the event held in Morocco.

May 2018

**EEEESE**

I participated with an Electronics project titled "I see" in the Electrical and Electronics Engineering Exhibitions (EEEESE) at the University of Khartoum.

I worked with html/css/bootstrap/JS to develop the front end for my projects when I first started, and for the backend I used php and MySQL. Previous year I solidified my knowledge in JavaScript and switched to React.js and firebase to develop my Apps. However I do from time to time use php for simpler projects. I have solid understanding of SEO. I am learning Flutter and Next JS at the moment. I used GitHub and am fluent with git and ready to work in teams. I have worked with many APIs (Google maps API, Payment Gateways ...) , so API integration is no challenge for me. I can build web apps from start to finish or modify and test existing apps. you can check my portfolio website for more info, and to see my recent projects.
